

SQL Functions – Analytic Functions

Version 1.0

3.2 Analytic Functions

Analytic functions compute an aggregate value based on a group of rows. The general syntax of analytic functions are:

Syntax:

```
analytic_function([ arguments ]) OVER (analytic_clause)
```

The analytic_clause breaks down into the following optional elements. [query_partition_clause][order_by_clause[windowing_clause]]

Following are the analytic functions described in this document

- Row number()
- Rank()
- Dense_rank()
- Decode()
- case

3.2.1 ROW_NUMBER()

ROW_NUMBER() gives a running serial number to a partition of records. It is very useful in reporting, especially in places where different partitions have their own serial numbers.

Syntax:

```
Row_Number() Over([Partition By Expression1, ...[N]]
Order_By Expression1, ...[N])
```

Consider the following table

Example:

SQL> select	t * from Student_Marks;		
STUDENT_ID	STUDENT_NAME	TOTAL_MARKS	BATCH
1001	Aarathi Sharma	381	A1001
1003	Lakshman K	327	A1001
1006	Silpa Sukul	307	B2001
	Zenith Sam	307	A1001
1005	Marithi Gunja		B2001
	Priya Mayi	266	B2001
	Jiyah Jigar		A1001
	Gopika Nakul		B2001
	Veena Vanji	367	C3001
	Mundhan Hubba	302	C3001
	Rohit Jayan		C3001
STUDENT_ID	STUDENT_NAME	TOTAL_MARKS	BATCH
1012	Meena Kayak	285	C3001
12 rows se	lected.		

Provide serial numbers to the students based on their total marks

select m.student_name, m.total_marks, m.batch, row_number() over (order by m.total_marks) Serial_Number from Student_Marks m;

STUDENT_NAME	TOTAL_MARKS	BATCH	SERIAL_NUMBER
Jiyah Jigar	171	A1001	1
riya Mayi		B2001	1 2 3 4
leena Kayak		C3001	3
lundhan Hubba		C3001	4
ohit Jayan		C3001	5 6 7 8 9
ilpa Sukul		B2001	ь
enith Sam		A1001	7
akshman K		A1001 B2001	8
arithi Gunja opika Nakul		B2001	10
leena Vanji		C3001	11
TUDENT_NAME	TOTAL_MARKS	BATCH	SERIAL_NUMBER
larathi Sharma	381	A1001	 12

Provide serial numbers to the students based on their batch

select m.student_name, m.total_marks, m.batch, row_number() over (order by m.batch) Serial_Number from Student Marks m;

STUDENT_NAME	TOTAL_MARKS	BATCH	SERIAL_NUMBER
 Jiyah Jigar	171	A1001	1
akshman K	327	A1001	1 2 3 4 5 6 7 8
larathi Sharma	381	A1001	3
Cenith Sam	307	A1001	4
larithi Gunja	355	B2001	5
ilpa Sukul	307	B2001	6
riya Mayi	266	B2001	7
opika Nakul		B2001	8
eena Vanji		C3001	
lundhan Hubba		C3001	10
lohit Jayan	302	C3001	11
TUDENT_NAME	TOTAL_MARKS	BATCH	SERIAL_NUMBER
leena Kayak	 285	C3001	12

Provide serial numbers to the students based on their total marks. Each batch should have their own serial numbers

select m.student_name, m.total_marks, m.batch, row_number() over (partition by m.batch order by m.total_marks) Serial_Number from Student_Marks m;

STUDENT_NAME	TOTAL_MARKS	BATCH	SERIAL_NUMBER
 Jiyah Jigar	171	A1001	 1
Cenith Sam		A1001	1 2 3 4 1 2 3 4 1 2
akshman K		A1001	3
arathi Sharma		A1001	4
Priya Mayi		B2001	1
ilpa Sukul		B2001	2
opika Nakul		B2001	3
Marithi Gunja		B2001	4
leena Kayak		C3001	1
lundhan Hubba		C3001	4
Rohit Jayan	302	C3001	3
STUDENT_NAME	TOTAL_MARKS	BATCH	SERIAL_NUMBER
 Jeena Vanji	367	C3001	4

3.2.2 Rank ()

Rank function is used to provide rank to the records based on some column value or expression. In case of a tie of 2 records at position N, RANK declares 2 positions N and skips position N+1 and gives position N+2 to the next record.

Syntax:

```
Rank() Over([Partition By Expression1, ...[N]]
Order_By Expression1, ...[N])
```

Example:

Rank the students based on total marks.

select m.student_name, m.total_marks, m.batch,
rank() over (order by m.total_marks) Rank
from Student_Marks m;

SQL> select m.studen 2 rank(> over (or 3 from Student_Ma	der by m.total_mar		,
STUDENT_NAME	TOTAL_MARKS	BATCH	RANK
Jiyah Jigar	171	A1001	1
Priya Mayi		B2001	2 3
Meena Kayak		C3001	3
Mundhan Hubba		C3001	4
Rohit Jayan		C3001	4
Silpa Sukul		B2001	6
Zenith Sam Lakshman K		A1001 A1001	6 8
Marithi Gunja		B2001	9
Gopika Nakul		B2001	9 9
Veena Vanji		C3001	11
STUDENT_NAME	TOTAL_MARKS	BATCH	RANK
Aarathi Sharma	381	A1001	12
12 rows selected.			

select m.student_name, m.total_marks, m.batch,

rank() over (order by m.total_marks desc) Rank from Student_Marks m;

STUDENT_NAME	TOTAL_MARKS	BATCH	RANK
Aarathi Sharma	381	A1001	1
Jeena Vanji	367	C3001	2
Marithi Gunja		B2001	2 3 3 5
Gopika Nakul		B2001	3
Lakshman K		A1001	5
Zenith Sam		A1001	6
Silpa Sukul		B2001	6
lundhan Hubba		C3001	8 8
Rohit Jayan		C3001	
Meena Kayak		C3001	10
Priya Mayi	266	B2001	11
STUDENT_NAME	TOTAL_MARKS	BATCH	RANK
 Jiyah Jigar	171	A1001	 12

Rank the students in each batch based on total marks.

select m.student_name, m.total_marks, m.batch, rank() over (partition by m.batch order by m.total_marks) Rank from Student_Marks m;

SQL> select m.student_name, m.total_marks, m.batch, 2 rank() over 3 (partition by m.batch order by m.total_marks) Rank 4 from Student_Marks m;					
STUDENT_NAME	TOTAL_MARKS	BATCH	RANK		
	307 327 381 266 307 355 355 285 302	A1001 A1001 A1001 B2001 B2001 B2001 B2001 C3001 C3001	12341233122

                                                                            RANK
Meena Kayak
                                           285 C3001
2 rows selected.
```

3.2.3 Dense_Rank()

Dense_Rank function is also used to provide rank to the records. In case of a tie of 2 records at position N, dense rank declares 2 positions N and gives position N+1 to the next record. Dense_Rank t does not skip any positions.

Syntax:

```
Dense_Rank() Over([Partition By Expression1, ...[N]]
Order By Expression1, ...[N])
```

Example:

Rank the students based on total marks.

select m.student_name, m.total_marks, m.batch, dense rank() over (order by m.total marks desc) dense Rank

from Student_Marks m;

STUDENT_NAME	TOTAL_MARKS	BATCH	DENSE_RANK
larathi Sharma	381	A1001	1

3.2.4 Ratio_to_Report

It computes the ratio of a value to the sum of a set of values. If expr evaluates to null, then the ratio-to-report value also evaluates to null. The set of values is determined by the query_partition_clause. If you omit that clause, then the ratio-to-report is computed over all rows returned by the query.

Syntax:

Ratio to report(expression) over (query partition clause)

Example:

Calculate the ratio of each student's mark to the total of all students' marks.

select m.student_name, m.total_marks, m.batch ,
ratio_to_report(m.total_marks) over() Ratio

from student_marks m;

STUDENT_NAME	TOTAL_MARKS	BATCH	RATIO
Aarathi Sharma	381	A1001	.102281879
Lakshman K	327	A1001	.087785235
Silpa Sukul	307	B2001	.082416107
Zenith Sam		A1001	.082416107
Marithi Gunja	355	B2001	.095302013
Priya Mayi		B2001	.071409396
Jiyah Jigar		A1001	.04590604
Gopika Nakul		B2001	.095302013
Veena Vanji		C3001	.09852349
Mundhan Hubba		C3001	.081073826
Rohit Jayan	302	C3001	.081073826
STUDENT_NAME	TOTAL_MARKS	BATCH	RATIO
 Meena Kayak	285	C3001	.076510067

Calculate the ratio of each student's mark to the total of all students' marks in a batch.

select m.student_name, m.total_marks, m.batch ,
ratio_to_report(m.total_marks) over(partition by m.batch) Ratio
from student_marks m;

SQL> select m.student_name, m.total_marks, m.batch , 2 ratio_to_report(m.total_marks) over(partition by m.batch> Ratio 3 from student_marks m;						
STUDENT_NAME	TOTAL_MARKS	BATCH	RATIO			
Jiyah Jigar		A1001				
Lakshman K		A1001				
Aarathi Sharma	381	A1001	.321247892			
Zenith Sam	307	A1001	.258853288			
Marithi Gunja	355	B2001	.276695246			
Silpa Sukul	307	B2001	.239282931			
Priya Mayi	266	B2001	.207326578			
Gopika Nakul	355	B2001	.276695246			
Veena Vanji	367	C3001	.292197452			
Mundhan Hubba	302	C3001	.24044586			
Rohit Jayan		C3001	.24044586			
STUDENT_NAME	TOTAL_MARKS	BATCH	RATIO			
 Meena Kayak	285	C3001	.226910828			
12 rows selected.						

3.2.5 Analytic Functions and Aggregate functions – A comparison

Analytic functions and Aggregate Functions compute an aggregate value based on a group of rows. Analytic functions differ from aggregate functions in that they return multiple rows for each group while aggregate functions return only single row per group.

Group	Source data	Output for Aggregate funtions (sum)	Output for analytic functions sum() over ()
	1		10
Group 1	3	10	10
	1		10
	5		10
	1	7	7
0,,,,,,,,,,,	2		7
Group 2	3		7
	1		7
	1		4
Crown 2	1	4	4
Group 3	1		4
	1		4
	2	12	12
Group 4	3		12
	7		12

Note: For an aggregate function, there will be only one output record per group. But for an analytic function, there will be a one output record per one input record.

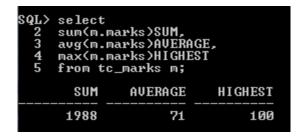

Example:

Consider the table

SUBJECT	STUDENT_ID	MARKS
Maths	1001	98
Language	1001	94
Science	1001	97 92
Env Science	1001	92
Maths	1002	63
Language	1002	89
Science	1002	95
Env Science	1002	60
Maths	1003	85
Language	1003	79
Science	1003	63
SUBJECT	STUDENT_ID	MARKS
Env Science	1003	100
Maths	1004	71
Language	1004	25
Science	1004	46
Env Science	1004	29
Maths	1005	52
Language	1005	68
Science	1005	26
Env Science	1005	83
Maths	1006	91
Language	1006	96
SUBJECT	STUDENT_ID	MARKS
Science	1006	73
Env Science	1006	47
1 aths	1007	48

Here analytic functions calculate the sum, average and highest value in a group (student_id) and the values are appended to each and every record. Here also there are 28 output records.
